SKILLS

Languages: C++, Python, C, Java, SQL
Tools/Platforms: Git, GitHub, Flask, MySQL, Linux, VS Code, Metasploit, Nmap, Burp Suite, OWASP, Wireshark
Soft Skills: Problem-Solving, Team Player, Adaptability

PROJECTS

Digital Footprint Investigator | GitHub Jul' 26

- Built an all-in-one OSINT platform consolidating 22 active and passive investigation tools into a single case-based workflow, replacing the need to juggle 15+ standalone CLI utilities.
- Engineered a Flask backend orchestrating modular Python tools (port scan, subdomain enum via crt.sh, WHOIS, SSL scan, breach check, dark web monitor, metadata extraction, username lookup across 40+ platforms, +14 more) with an entity correlation engine that auto-extracts emails, IPs, domains, GPS coordinates, and CVEs to suggest next-step tools.
- Shipped one-click multi-page PDF reports with SHA-256 chain-of-custody, SQLite-backed case persistence, a Ctrl+K command palette, dark/light theme, and single-command Docker deploy.
  Tech Stack: Python, Flask, SQLite, ReportLab, dnspython, HTML, CSS, JavaScript, Docker

VulnPilot AI | GitHub May' 26

- Built an AI-assisted pentest framework chaining recon → CVE mapping → safe validation → reporting into one authorized-scan pipeline, cutting per-host triage from ~2 hours to under 10 minutes.
- Engineered a modular Python engine pairing Nmap/RustScan discovery with NVD + CIRCL CVE correlation and a rule-based AI selector that runs only allowlisted Metasploit check modules under a 3-tier safety layer (safe / audit / exploit).
- Shipped a Flask real-time dashboard with SQLAlchemy scan history and auto-generated JSON / MD / PDF reports tagged with CVSS severity.
  Tech Stack: *Python 3.10+, Nmap, RustScan, Metasploit RPC, Flask, SQLAlchemy, SQLite/PostgreSQL CVSS scoring, ReportLab (PDF/JSON/Markdown reports).*

Secure File Management System | GitHub Apr' 26

- Built a single-file C++ CLI application demonstrating a role-based secure file workflow with layered access checks — authentication, OTP-based second step, filename threat filter, and per-operation audit logging.
- Implemented 3 roles (admin / user / guest) with fine-grained permissions across 9 file operations (create, write, read, delete, rename, size, modified time, share, logout), XOR-based content obfuscation, a 4-digit OTP challenge, and a persistent user store with append-only action log.
- Delivered a self-contained ~230-line implementation with 9 authenticated operations gated by role checks and a timestamped log.txt audit trail capturing every create / read / write / delete / rename event.
  Tech Stack: *C++, STL (<fstream>, <sys/stat.h>, <ctime>), XOR obfuscation, file-based user & audit store, CLI.*

TRAINING

Ethical Hacking & Network Security Mastery | LPU | Certificate — Grade: A Jun' 26 – Jul' 26

- Executed end-to-end penetration testing labs using Nmap, Metasploit, Wireshark, and Burp Suite, identifying and validating 30+ CVEs across simulated targets.
- Analyzed and remediated OWASP Top 10 vulnerabilities (SQLi, XSS, CSRF, IDOR), reducing successful exploit attempts by 60% on hardened lab environments.
- Applied training to build Digital Footprint Investigator, a 22-tool OSINT platform with entity correlation, chain-of-custody PDF reports, and Docker deployment.

CERTIFICATES

Pre Security | ***TryHackMe*** May' 24

Ethical Hacking | ***Skillera*** Apr' 24

EDUCATION

Lovely Professional University Phagwara, Punjab
Bachelor of Technology Aug' 24 – Jul' 28
Computer Science and Engineering; CGPA: 7.69

Swami Vivekanand University Sagar, Madhya Pradesh
Diploma In Computer Science Mar' 18 – May' 22
Percentage: 75
